SRS – Online Internship and Placement Preparation Portal

Functional Requirements

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale (short)
FR-001	Functional	The system shall allow students to register and log in using their credentials, and authenticate them on each session.	High	Pass: valid credentials grant access to the profile dashboard. Fail: invalid credentials are rejected with an error message.	Secures access and personalizes each student's data.
FR-002	Functional	The system shall display internship listings posted by admin and allow students to apply to a listing of their choice.	High	Pass: the student's application is recorded and visible under "My Applications". Fail: duplicate applications to the same listing are blocked.	Core feature enabling students to act on internship opportunities.
FR-003	Functional	The system shall allow students to practice aptitude, technical MCQs, and coding problems from a categorized question bank.	High	Pass: the student selects a category and receives relevant questions with a scored result. Fail: no questions are returned or scoring is	Directly supports the portal's core preparation purpose.

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale (short)
				skipped.	
FR-004	Functional	The system shall allow students to take timed mock tests and view their results and detailed answer analysis afterward.	Medium	Pass: the test auto-submits at the time limit and shows the score plus a correct/incorrect breakdown. Fail: the test allows unlimited time or shows no analysis.	Simulates real interview/test conditions and gives actionable feedback.
FR-005	Functional	The system shall generate a personal analytics summary (performance trends, strengths/weaknesses) for each student based on their test and practice history.	Medium	Pass: the analytics dashboard reflects updated scores after each new attempt. Fail: the dashboard shows stale or incorrect aggregated data.	Helps students track progress and focus preparation effectively.

Non-Functional Requirements

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale (short)
NFR001	Non-Functional	The system shall respond to user actions (page loads, test submissions,	High	Pass: 95% of requests return within 2s in testing. Fail: noticeable lag	Ensures a smooth, non-frustrating user experience.

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale (short)
		search queries) within 2 seconds under normal load.		or timeout on core actions.	
NFR002	Non-Functional	The system shall protect user data (credentials, personal info, scores) using encrypted storage and secure authentication.	High	Pass: passwords are stored hashed; data is transmitted over HTTPS. Fail: plaintext storage or unencrypted transmission found.	Protects student privacy and builds trust in the platform.
NFR003	Non-Functional	The system shall be accessible and function correctly across common browsers (Chrome, Firefox, Edge) and device sizes (desktop, tablet, mobile).	Medium	Pass: core features are usable without layout breakage on tested browsers/devices. Fail: broken UI or non-functional features on any listed browser/device.	Maximizes reach since students use varied devices.
NFR004	Non-Functional	The system shall enforce role-based access control so that students can access only student functions and their own	High	Pass: a student opening an admin page or another student's results gets an access-denied response. Fail: any admin	Prevents unauthorized changes to listings and the question bank, and protects student privacy.

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale (short)
		data, and only admins can access admin functions.		function or other user's data is reachable by a student.	
NFR005	Non-Functional	The system shall manage sessions securely: sessions expire after 30 minutes of inactivity and on logout, and expired sessions cannot access protected pages.	High	Pass: after logout or timeout, a protected URL redirects to the Login page. Fail: protected pages stay accessible after logout or timeout.	Stops misuse of accounts left logged in on shared or lab computers.
NFR006	Non-Functional	The system shall validate and sanitize all user inputs (forms, filters, resume uploads, coding submissions) on the server side to prevent injection and script attacks.	High	Pass: malicious input (e.g. SQL or script text) is rejected or neutralized, and no data is exposed or altered. Fail: injected input is executed or stored unsanitized.	Protects the database and other users from the most common web attacks.
